Bringing home the warmth of wood heating

Wood Heater Collection

Model Shown: Norseman Nevada MKII
See page 7

The Home of Wood Heating
We’ve been transforming houses across the country into warm, comfy homes for over 30 years. So we understand that buying a wood heater can be a big decision. Our heating experts are dedicated to helping you find the perfect heater to suit your needs. We have some of the cleanest burning models on the market – burning up to three times cleaner than the national standard for emissions – and all wood heaters come with a warranty of up to 15 years. Plus, our outstanding after-sales service makes sure you’re never left in the cold.

Cleaner burning heaters are better for the environment
The national standard for emissions is 1.5g/kg. We’re proud to share that our best wood heaters emit under 0.6g/kg. Discover our cleaner heaters with the following clean emissions guide:

Under 0.6g/kg Under 1g/kg Under 1.5g/kg

How to find the perfect heater for your home
Generally, wood heaters fall into two styles:

Freestanding
If you don’t have an existing fireplace, a freestanding wood heater is ideal. It can create a cozy focal point for your living space, with very little structural work involved in the installation.

Built-In
Insert
If you do have an existing fireplace, it’s easy to upgrade with our range of insert heaters. Zero Clearance
If you don’t have an existing fireplace, a Zero Clearance heater can be inserted into any blank wall with minimal structural impact.

What’s your style?
Do you like that functional modern look, or prefer a touch of yesteryear charm? Maybe you love clean minimalist lines or find homely and traditional is more your thing. We have wood heaters in all styles and sizes, so have a look through and find your favourite.

Saxon

Contemporary style meets innovation in the Saxon range. This efficient and environmentally friendly range burns up to three times cleaner than the national standard for emissions of 1.5g/kg.

On the inside, the SKAMOLEX™ baffle pushes the heat back into the fire for a cleaner, more efficient burn. The time-delay fan starts 20 minutes after the heater door is closed, ensuring only hot air is being amplified into the room.

Built tough to last, the ceramic glass door is self-cleaning and the 8mm steel firebox eliminates the need for firebricks and comes with a 15 year firebox warranty.

### Blackwood

$3,495

- 750H x 690W x 560D
- One of our most popular models, ideal for medium sized spaces
- Includes time delay fan

All measurements are in mm unless otherwise stated. Refer to the individual product installation manual for final specifications.
There are several important factors to consider when you’re planning to install a wood heater:
- Heater installation dimensions
- Hearth clearances
- The position of the heater
- The installation of the flue system, and where the flue will exit the roof, as it must be sealed

It’s important to use a qualified professional for installation as they can offer valuable advice and insights as well as identify any potential problems.

### Insert Heater

### Zero Clearance Heater

**Maxiheat Zero Clearance Box**

If you like the look of an insert fireplace but don’t have an existing brick chimney, use the Maxiheat Zero Clearance box with any of our compatible insert heaters to achieve the same look. No major structural work required.

### Flue Installation

Below are the most common types of heater and flue installations.

**Correct flue height**

Most wood heater installations are completed trouble free.

But with some houses, simple extra measures need to be taken to ensure the flue is the correct height to avoid the hassle of downdrafts or smoke blowing into neighbouring properties.

The minimum height for a wood heater installation is 4.6 metres from the bottom of the heater to the top of the flue.

Sometimes the flue will need to be extended because the flue must extend a minimum of one metre from where it exits the roof.

Keep in mind that all wood heater installations must meet the latest version of the Australian installation standards, AS/NZS 2918.
Maxiheat

Add warmth to your home with our value range of Maxiheat wood heaters. This quality range includes both freestanding and insert models.

Add a focal point to your living space with our Manor 1000 with its rustic charm or update an existing fire place with the traditional look of the Nomad insert.

Check your local store for availability. Accessories, including flue kits, where pictured are not included and can be purchased as optional extras. Colour options are a representation only and may vary in store. We reserve the right to change specifications without notice. Price and product specification is correct at time of printing and may be subject to change without notice. Insert wood heaters are not zero clearance appliances, which means they must not be installed in timber stud walls or within an enclosure made of combustible materials. All insert heaters must be installed in a full masonry cavity, unless installed with a Zero Clearance box and to the latest version of AS/NZS 2918 specifications. Refer to the appliance installation manual for all clearances and procedures prior to installation. Zero clearance – details provided in this brochure regarding the installation of a zero clearance system are for information purposes only and should not be relied upon as full installation instructions. Heating performance may reduce as a result of vaulted ceilings, drafts, large glassed areas or poor insulation. Installation is not included and must be conducted by a qualified installer. Refer to your local Barbeques Galore for more information.
